

Löhnert GmbH aqua blue
Herrn Sikora
Martin-Albert-Straße 9
90491 Nürnberg

Subject: Thank you for the excellent support!

Nürnberg, 04. November 2012

Dear Mr Sikora

We have the technology of aqua blue installed since January 2012 and do not only provide our whole drinking water system but also the heating cycle.

We want to thank you for your professional support and gladly confirm that we have had significantly less lime deposits and that we have been able to reach better cleaning results with reduced time and use of materials since then.

Shower heads, tiles, glass walls and mirror surface can be cleaned with a lower use of detergents and can not only be kept free from lime scale but also shined up. That saves costs for us and protects the environment at the same time and therefore supports our Green Globe activities.

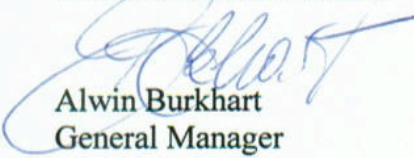

We regret to inform you that we cannot make a final appraisal of the system's effects on the heating cycle, even if we achieved considerable savings, which can be partially attributed to the use of aqua blue.

Since we have a flow controller in use at the same time, we therefore have to invest less energy for the water treatment and achieve savings of over 20 %. Since the water is substantially softer and we apply modified shower heads additionally, the guest doesn't have a loss of comfort but enjoys a comfortable showering pleasure.

If the past performances prove to be true, we assume a rapid amortization of the system and would choose aqua blue anytime.

Again, thank you also for the noiseless and dirt-free installation, which hasn't affected the plant in a negative way.

Kind regards

Alwin Burkhart
General Manager

Michele Loi
Chief Engineer
